

Gen 3 Move Animation Pack

About this pack

The **Gen 3 Move Animation Pack** is a collection of animation files, sprite sheets and sound effects for use with **Pokémon Essentials v21.1**.

This resource aims to replicate the move animation aesthetic of the Gen 3 Pokémon games: FireRed, LeafGreen, Ruby, Sapphire and Emerald. While inspired by the Gen 8 and Gen 9 Animation Projects, this pack and all its animations have been created entirely from scratch.

This first version of the pack contains over **100 animations: 11 common animations** and **89 move animations**, as well as **5 test moves** that do not have opponent side animations yet. You can find a complete list of the moves featured in this pack in the **Animation List** document.

Installation

Before installing this pack, make sure to **back up** your Essentials project or at least your **PkmnAnimations.rxdata** just in case there are any issues.

The actual installation process is very simple, just copy over the animations and sound effects to their proper folders in your Essentials project. You can either copy the files over individually or replace the folders with the ones provided in the pack. Each animation has its own clearly named sound effects, sprite sheets and backgrounds, which means that you can easily replace sound effects, sprites and backgrounds on one move without affecting any of the other moves.

The animation files can be added in two different ways. You can either use the **PkmnAnimations** file which contains all the move animations already organized (replacing all the default Essentials animations), or by importing each move that you want to add from the **Individual Animation Files** folder. The **PkmnAnimations** file can be found in the **Data** folder. If you wish to **import each animation file individually**, place them in the **root of your project folder** and you can then access them from within the in-game **Animation Editor**. Compile your project and you are set.

Other comments

Credit for using this resource in your project (either wholly or partially) is appreciated but not required. If you wish to do so, you can credit **TheTinfoilTemplar**. You are also free to use this pack as a template or foundation for creating your own animation resource.

I want to thank the **PokemonRMXP** community on Reddit, as well as the Pokémon fan game community in general. I have benefited greatly from all the advice, tutorials and resources available. This pack would not have been possible without it. This is my way of saying thank you by hopefully giving something back to the community. Lastly, I wish to thank **FrysHarry**, co-creator and designer of **Pokémon Magenta**, who has provided much valuable feedback during the pack's development process.

I hope you will enjoy this resource and that it serves its purpose. I wish you all the best of luck on your projects! ***/TheTinfoilTemplar***
